STEVENS PARTY HOLDS MEETING IN STONY.

Mr. Burrows and Mr. Cook Orate on the Principles of the New Party to a Crowded House.

A meeting was held in Kelly's hall on Saturday evening, under the auspices of the new Stevens Reconstruction Party. Mr. J. W. McCulla was in the chair, and, after explaining the object in calling the meeting, he introduced Mr. Cook, an accountant, from the City.

Mr. Cook dealt with the condition of affairs in the Federal arena, and offered suggestions for the righting of the unfairness which the people have been contending with for some time. He intimated that recently he had been employed in various occupations, among others working in a lumber camp, and remarked that he had always found the working people willing to help each other in a co-operative spirit. He noted the difference when it came to dealing with financial heads—that these were never willing to co-operate with anyone unless there was a very material return for themselves.

The next speaker was Mr. A. L. Burrows, the motor car-dealer, of Edmonton. Mr. Burrows is the candidate in West Edmonton for the Stevens Reconstruction Party. He gave some facts, showing how unfair to the common people the present system is, and extolled the new leader, Mr. H. H. Stevens, for the good work he had been able to accomplish while a member in the House of Commons, and more particularly when he was acting as chairman of the Special Committee investigating price spreads in the Dominion. Mr. Burrows intimated there would be a number of reforms instituted in the event of Mr. Stevens gaining power, and strongly urged all present to get behind, and work with a will, for the Reconstruction Party.

Picking a Federal Candidate.

At the Social Credit group gathering held in Stony on the 12th to select delegates to a convention for the S. P. Provincial constituency the following were chosen:

Mrs. C. Wood
 Olaf Ohlsen, Duffield
 D. Brox, Spruce Grove.
 Mr. W. E. Hayes presided at the meeting. About two score delegates were present.

The final selection of a nominee from the S. P. Constituency fell on J. A. Reid. The other provincial constituencies contained in this Federal riding (Edson Jasper) were holding tryouts the same afternoon. When the nominees met the Advisory Council, later, in Edmonton, Mr. Walter Kuhl, of Spruce Grove district, was selected as the candidate.

The Advisory Council consisted of Dr. W. S. Hall, G. L. King, Mark Robertson, Orvis Kennedy, Dr. C. B. Willis.

Mrs. R. E. Wood, Stony Plain, was elected President of the Edson-Jasper Constituency Social Credit association.

"STALE" TEA

To Burn Or Not To Burn

There will be few people in Western Canada, whether farmers, business men or wage earners who will quarrel with the policy which resulted in the announcement of the Canada Grain Board's establishment of a minimum price of 8 1/4 cents for No. 1 Northern wheat f.o.b. Fort William.

Regardless of political affiliations or economic beliefs, the general public in the west greeted the announcement with approval as soon as it was made and, it is to be hoped, it will be accorded general backing in the east as well.

But, the extent to which this policy will ensure to the benefit of Western farmers, who are hard pressed as a result of a prolonged period of drought, followed this year by a most disappointing situation as a result of wide-spread ravage of the wheat crops by rust, will depend upon the price spreads which, at the time of writing, are expected to be announced any day.

As harvesting and threshing operations progress, the amount of damage from rust is being daily revealed as a disaster of immense proportions, and while estimates of the extent of the loss sustained by farmers in Manitoba and Saskatchewan vary from day to day, it is quite apparent that the final figures will show a loss of great magnitude.

The rust which invaded large tracts of the best wheat growing areas of the west with such devastating effect, has not only reduced yields of what earlier in the season promised to be abundant crops but it has depreciated the grades to an extent comparable with the lowered yields.

At the moment there are thousands of acres of low grade wheat standing in the field awaiting the time when the grain is sufficiently dry to ensure a good burn because it does not pay to cut it.

Before taking this drastic action to destroy a lot of grain which conceivably may be of some value in the future, farmers would be well advised to at least await the promised announcement of spreads prices. It is quite possible that the spreads may be set at such figures that even the lowest grade wheat can be threshed and stored on the farm without too serious loss to the grower.

The Federal government has recognized the loss sustained by farmers through drought, in the past few years as a national calamity and it is surely reasonable to suppose that the loss from rust this year will be regarded in the same category and that recognition will be given to the fact when minimum prices for the lower grades are set.

No one can gainsay the statement that the blame for damage by rust cannot be laid at the farmer's door. Rust damage is just as much a national calamity as the drought loss of recent years, and this being the case, there is every reason why the national purse strings should be loosened to relieve the predicament in which such a large number of Western farmers find themselves with winter knocking at the door.

It must be remembered that the grain about to be delivered to the farmer has already cost the farmer something in outfit and labor and would cost more if it were cut, threshed and hauled to the elevator.

Unfortunately the present market price is too low to cover all these costs without taking into consideration any margin of profit for the farmer who raised the grain.

If the crop is destroyed by fire not only does the grower lose what he has already put into it in cash and labor, but it represents a loss to the country at large. It might be well worth the country's while to advance the farmer at least sufficient money to save the grain by way of a fixed minimum price, thus salvaging what has already been spent on the crop and perhaps saving what might otherwise have to be expended later in the form of relief.

Such a measure might well be regarded in the light of a partnership between the individual and the nation for the mutual benefit of both.

There is also the question of the effect on the morale of the unfortunate grower. After losing a series of crops from drought the economic necessity of burning a crop which was not very long ago so promising must have a depressing effect on the farmer's heart. If this effect can be averted without serious financial loss to the country, it may be well worth the expenditure.

Flies Prefer Orange Color

Primrose Yellow Is Second Choice And Carmine Third

It's this way with flies—they'd rather sit on an orange than a cucumber, if the choice depends on color. Such was the deduction announced at the University of California recently as a result of scientific observation of color-preferences of multitudes of flies. A huge checker-board with eleven black squares in various colors was hung up in a dairy barn of the university's college of agriculture. The flies were invited to come and make themselves at home. For three months this went on while Lester J. Berry, graduate student in charge of the experiment, and his aides kept watch. The tabulated results announced by Berry show that the 10,073 flies picked out the orange square while only 2,007 sought out the green. Primrose yellow drew 6,541; carmine, 4,415; light blue, 3,480, and white, 2,360. More esthetic flies went after coral red and pink.

Buried Elegance

The mayor had just laid the foundation stone of a new wing for the hospital, and the spectators awaited his speech.

"What can I do?" cried the harassed mayor to his wife. "I've laid the stone on top of it."

Would Increase Efficiency

Scientific Investigators Recommend Five Light Meals A Day

When you eat a meal, what is the effect on your work? Scientific investigators have repeatedly investigated, and repeatedly answered that the effect is bad. But their studies have generally been based on the assumption that the meal is about one-third of your daily diet, since you eat three meals a day. Now Howard W. Haggard and Léon A. Greenberg, in a book, "Diet and Efficiency," report that the best schedule is five a day, all comparatively light, and that after a light meal in mid-morning or mid-afternoon your efficiency is increased 10 per cent.

This conclusion refutes the older American tradition, which had its basis in farm life. But it is in accord with the habit of many office-workers, and it corroborates the advertising appeals of several candies and soft drinks.—Business Week.

A Good Suggestion

The young bore at the party, who was doing his share of the entertaining, had already exceeded the time-limit.

"Now, continuing my imitations," he said, "I can mimic any bird. Will somebody name a bird, please?"

"A homing pigeon," suggested one of the company. 2115

Bomb Shelter De Luxe

City Of Paris Making Provision For Air Raids

Thirty feet under the ground in the Avenue Foch, one of the most fashionable residential streets in Paris, a model concrete shelter has been constructed for use in the event of air raids. The shelter consists of several rooms equipped with all conveniences, including apparatus for detecting the presence of poison gas outside. It will serve as the model for many more which are to be built by the city of Paris. It is built under a mansion. Its roof is a block of concrete six feet thick. Above this is 10 feet of earth then a one-foot thick block of concrete, and finally another layer of earth. Two stairways lead to the shelter, and at the foot of each is a steel and concrete door weighing a ton. There are special rooms for giving first aid to injured persons, machine rooms for light and ventilation purposes and storerooms. Although it is connected with the city's regular light supply, the shelter is equipped with generators and batteries for providing its own light if necessary.

China Has New Tax

After Next May Those Who Cannot Read Will Be Fined

China has announced that after May 1, 1936, anyone in Nanking between the ages of six and fifty who cannot read will be fined. Appalled at the ignorance of the people of this capital, the Chinese authorities have issued a primer of 1000 characters and ordered students to teach the ignorant from it or give up hope of graduation. As half the population of the city cannot read, the students will be kept busy until the new law goes into effect. The police will be the official examiners, and will stop anyone they wish who if he fails to read the primer, will have to pay the equivalent of half a cent on the spot. The penalty is called the Ignorant People's Tax.

Parliament In Jerusalem

Arabs Expel, Early Establishment Of Council In Palestine

Early establishment of a legislative council in Palestine is considered so certain Arab leaders are merely awaiting a British "Order in Council" establishing the parliament before disclosing their position. It was stated by Mirat-Ash-Sharqan semi-weekly Arab newspaper. The Jews of Palestine have made it clear that under no conditions will they accept a legislative council at this time.

Jelly-Fish Kills Man

Sting Of Giant Type Proved Fatal

To Italian

A sting by a giant jelly-fish has resulted in the death of Salvatore Cantarella, an Italian cane farmer near Brisbane. He was bathing at Corragra Beach when he suddenly cried out loudly for help. His companions rushed out and pulled him ashore. He was given artificial respiration and restoratives but in vain, and he died on his way to the hospital. Tentacle marks were found on his body and it was at first thought that he had been attacked by an octopus. Later, however, it was found that he had been paralyzed by a giant Portuguese Man of War, a type of jelly-fish that is found along the Queensland coast. These jelly-fish often bore knifed up to 12 feet long, and their sting is capable of causing temporary paralysis.

A species of honey-making wasp is found in Mexico and the southern part of Texas.

Don't forget that an honest man never has to proclaim the fact.

Lost Books Found

Volumes Missing For 41 Years Returned To Prince Albert Man

Two books which Alderman G. H. Carr of Prince Albert believed he had lost in Greenland 41 years ago when a member of Admiral Peary's 1893-94 North Pole expedition, turned up recently in the mail.

Mr. Carr was notified a parcel of books awaited him at the customs office. On opening the parcel he discovered his two volumes of Stanley's "In Darkest Africa," which he had read during the long Arctic night while the polar party waited to begin the futile dash for the North Pole.

They had been discovered among Peary's effects and forwarded by the admiral's daughter, Mrs. Edwin Starford, of Washington, D.C.

Would Increase Sales

If every little market in the land and every large one could furnish its customers with top quality eggs, which could be bought with assurance just as good milk can be had at every corner store, we have no way of estimating what a benefit every producer of eggs would receive.

NATURE'S OWN SALT-TREATED SPEEDWAY

While Canadian engineers and research scientists have been working out methods of creating good highway surfaces by treatment with common salt, the world's most famous race-drivers have turned to natural salt-treated speedways for their world record attempts. Photo shows: A slick six-spoked test on the new speedway of the great salt desert in Utah where Sir Malcolm Campbell in his famous Bluebird set a new world record and bettered 300 miles per hour.

Appleford's

HEAVY WAXED PAPER

Warehouses At Calgary, Edmonton, Regina and Winnipeg

After Ten Years' Research Scientists Have Evolved Rust Resistant Wheat

After a decade of intensive and laborious research in laboratories and on experimental farms, wheat that will resist the attack of rust and that will mill and bake as well as Marquis and Reward varieties is nearing the stage when there will be quantities available for distribution to the farmers of western Canada in 1937.

In fact, on Dominion experimental farms in different districts in the west small plots of this wheat, which is as yet only identified by a number, could be seen this summer, standing straight and tall with well-filled heads. Beside them in striking contrast were patches of ordinary rust-susceptible varieties, laid waste by the vicious parasite that robbed western Canadian agriculture of millions of bushels of wheat, and consequently millions of dollars, during the present crop year.

The development of this wheat, which will mean that in comparatively short time farmers will not have to worry about warm and moist July days, is not something that happened overnight. It is the outcome of the combined efforts of plant pathologists, plant breeders, millers and bakers who set to work in 1925 to find a strain of wheat that would not succumb to rust and that would possess milling and baking qualities as high as Marquis and Reward.

What that was rust-resistant was developed early in the campaign to eliminate one of the greatest hazards of farming, and then came the work of producing a strain that would measure up to the high standards demanded by millers and bakers, for without them rust-resistant wheat would be worthless.

In 1935, after carrying tests of 33 rust-resistant types that had been evolved in the laboratories, six were regarded as suitable. Further tests reduced this number to two, and then efforts were concentrated on increasing the seed of these varieties so there would be sufficient for distribution to farmers.

Today one of these new wheats, unaffected by even the severe rust invasion of the present year and equal to Marquis and Reward in milling and baking, is almost ready for distribution to registered farmers. The first step in increasing the seed of the variety was carried out in the crop year of 1934. During the present year there were plots of it grown on Dominion government experimental farms and stations, weathering the rust, ripening early and yielding well.

One plot on the experimental farm at Morden, where moisture was rather scarce during the summer, returned 25 bushels to the acre. Next summer greater quantities will be grown for seed purposes on the experimental farms, and for 1937 it is expected that there will be sufficient to supply registered farmers with quantities. Then it will rapidly become available for general distribution.

This type has been developed by crossing Reward, which is world famous for its high milling and baking qualities, with a variety known as Marquis-Kimmer cross.

So far no official announcement of this rust-resistant wheat has come from the scientists in Dominion rust research laboratories in Winnipeg. In other branches of the Dominion department of agriculture, the experimental farms and the universities of the western provinces, who have all co-operated in its development.

Its rust-resistant and milling and baking qualities have all been well proved by exhaustive testing, but naturally they have guarded against a premature announcement, not wanting to raise false hopes in the minds of an agricultural population that has waited so long for a wheat that would not fade and wither under a rust attack. However, all the men who have participated in the developing and testing of this strain will meet in Winnipeg shortly—arrangements for the date of this meeting are already under way—then

final tests and checks on the quality will be compared and an announcement can be expected. Also, farmers can expect from this meeting information on the distribution of the available seed.

While this unnamed wheat might be thought to be the end of patient, unceasing search for a perfect wheat, it is not regarded as such by the scientists who have produced it. Research with scores of other varieties of rust-resistant wheat is still in progress, despite the concentration recently toward producing seed supplies of the varieties that have so far proved that the dread disease of the prairie wheat belt can be mastered. Even though these types show good yielding ability, ripen early and meet milling and baking requirements, rust research will go on. The scientists' attack on other field crop diseases—root rots, ergot and loose and covered smuts—will continue.

Their efforts recently have also included one and now work on oat rust. One variety, known as Anthony oats, has been already produced, and it is highly resistant to stem rust. However, this variety is not capable of fighting off crown rust (orange rust), which attacks the leaf and the oat plant, thriving on the food that is intended for the development of the kernels.

J. N. Welsh, of the Dominion rust research laboratory, is one of the scientists who have been working on energy to find a strain of rust-resistant oats. In April, he announced in Winnipeg before the meeting of the associate committee of field crop diseases, the synthetic production of one or two prominent new varieties which has been developed in the laboratory and was to be increased for distribution of the seed to farmers.

The Television Car

Projects Scenes Clearer To Radio Listeners Than To Audience

Recently, in Germany, there appeared the television pick-up car which carries on its roof a standard motion-picture camera mounted on a cast-iron roof, allowing the camera to be moved in any desired direction. The hollow pillar of the camera support is used to convey the exposed film ribbon to the dark room which is in the interior of the car. By use of special apparatus and extremely fast working chemicals, the film is developed in one and one-half minutes. The still wet ribbon of film is sent at once through a device which cuts the single film pictures in 180 lines and transforms each line in a succession of strong and weak electrical impulses. The impulses are radiated from a transmitter into the air and the radio listener, receiving these impulses, can see anything and everything that happens, often much better than the audience which is directly at the scene while the event is taking place.

Germany's One-Man Band

Made In 1805 Is Playing Again After 100-Year Rest

After resting for more than 100 years, the original one-man-band is playing again at the Provincial Trade Museum at Stuttgart, Germany, and its 250 instruments are frequently heard in blended harmony. The "Panharmonicon," as it then was called, was constructed in Vienna, Austria, in 1805, by Michael, a Russian mechanic. Beethoven composed a special symphony for it to celebrate the Duke of Wellington's victory at Waterloo in the Peninsula War. Now known as the "Orchestreton," the one-man-band includes 38 clarinets, 37 flutes, 30 hautboys, 16 bassoons, eight Trumpets and a large drum with cymbals and triangle.

Hoarding Money In Homes

Twenty-seven billion francs in gold and silver is tucked away in the traditional French wood sock. Official statistics show that 1,000-franc bills are a prime favorite with hoarders, since more than seven billion francs worth have disappeared from circulation.

Use For Polar Winds

Scientist Believes They Are Potential Source Of Power

The screeching rivers of icy air which come over the barren polar regions will be harnessed by future generations and used for power when coal is scarce and oil is exhausted, Professor P. Debenham forecast in his presidential address before the geography section of the British Association for the Advancement of Science.

Prof. Debenham, in a paper on "Some Aspects of the Polar Regions," invited his listeners to compare the well-known power of Niagara Falls, about 6,000 tons of water falling each second, with the power in the little known Adèle land, "where an air river of at least 50 miles in width and probably some hundreds of feet in depth is moving outwards from the plateau at an average velocity of 50 miles per hour, or about 70 feet per second, most of the year."

Prof. Debenham did not wish to further anticipate some H. G. Wells of the future who will "ring the Antarctic with windmills producing power to be sent by wireless to the southern hemisphere, but the winds of the Antarctic have to be felt to be believed, and nothing is quite impossible to physicists and engineers."

May Be One Reason

The Fort Arthur News-Chronicle says, a reason of Great War statistics show some of the principal losses, men known killed, as follows: Russia, 2,762,064; Germany, 2,050,466; France, 1,427,000; British Empire, 1,098,919; Austria-Hungary, 1,200,000; Serbia, 977,543; Italy, 507,160. This may explain in part Italy's present willingness to try it again.

The Farm Shelter Belt Is An Important Factor In Growing Vegetable Supply

Protein Content Of Wheat

Tests Are Made From Samples Of Western Crop

First tests of the 1935 wheat crop made by the grain research laboratory of the board of grain commissioners disclosed a protein content about equal to that shown in tests of the 1934 crop at the same period.

The average of tests from 27 points in Alberta last year showed a protein content of 14.5 per cent, and for this year the content from the same areas was 14.4 per cent. For the 176 points in Saskatchewan which showed a protein content last year of 15 per cent, the figure for the tests this year was 14.5 per cent. The Manitoba tests for 25 points was 12.8 per cent, compared with 13.6 per cent last year.

So far 407 samples of the 1935 crop have been analyzed, comprising 48 samples from Alberta, 513 from Saskatchewan and 46 from Manitoba. Further tests will be made as the harvesting of the crop continues.

The combined production of Canada of all items of concentrated milk (condensed, evaporated, casein and powders) for the seven months of 1935, ended July 31, totalled 65,355,265 pounds, showing an increase of 9,507,998 pounds, or 17 per cent, over the corresponding seven months of 1934.

For the fiscal year ending June 30, 1936, the allotment to the Federal Department of Agriculture of the United States is \$125,113,483.

The relation and value of trees to the problem of drought and soil drifting in the three prairie provinces is being seriously studied by Dr. E. S. Archibald, Chairman of the Prairie Farm Rehabilitation Committee, the members of the committee, and associated workers. They are being guided in the matter of tree planting principally by Norman M. Ross, Chief of the Division of Tree Planting, Dominion Experimental Farms Branch, whose headquarters are the Dominion Forestry Station, Indian Head, Sask., from where in the past 25 years many millions of trees have been grown and distributed free to farmers in Western Canada. The Dominion Forestry Station at Sutherland, Sask., also comes under Mr. Ross' administration, and from there also millions of trees have been shipped to all parts of the prairies in recent years.

In discussing tree planting on the prairies, Mr. Ross, whose experience in tree planting in Western Canada extends over 37 years, says that one of the most popular ideas seems to be that drought can be controlled, the climate changed, and rainfall increased, by the wholesale planting of trees. As a matter of fact, he explains, there is no scientific basis for data to support the assumption that either climate can be changed or precipitation increased as a result of any tree planting programme which it might be practical to undertake on farm land specially adapted to cereal cropping.

In connection with the possible improvement in agricultural conditions that might be brought about by a wider planting of trees two main divisions may be considered: First, home shelter belt plantings, including protection for gardens, stable yards and small adjoining pastures; and second, field crop shelter belts for the protection of cereals and forage crops.

Those who have studied the situation in an endeavor to arrive at some agricultural policy which will guard against a recurrence of the drought conditions admit that what is needed is to try and make each individual farm self-sustaining during periods of drought and depression. This is where the farm home shelter plantings can play a very important role. Everyone familiar with prairie conditions knows that in average seasons, and particularly during periods of drought, it is practically impossible to grow a good supply of vegetables without adequate shelter.

The economic value of the farm garden perhaps has never been fully appreciated, Mr. Ross points out, but this has been shown up very definitely during recent years. In many cases the produce from a good farm garden has kept the farmer and his family off relief. With suitable shelter a supply of home-grown vegetables and hardy fruits can be practically assured unless conditions are extremely abnormal. These home shelter belts might well be extended to enclose small pastures and winter feeding paddocks on the average farm. The aesthetic value of such shelter belts is also extremely important.

The idea of field crop shelters is only going to step further and there is no reason to suppose that suitably disposed belts would not have a very beneficial influence. Shelter belts benefit from plants by protecting them from mechanical injury during severe windstorms. They also lessen the force of winds, decrease evaporation of moisture, help to accumulate and hold snow during winter time and have a tendency to check soil drifting. While it is admitted there is no great amount of scientific data on this subject, it is known from general observation that in many districts very much benefit has been noted, both in the saving of crops from drifting and in increased yields.

A Long Distance Paddle

John Goetz was happy even though he was so stiff he could hardly move and his hands were badly blistered. He had paddled 200 miles from his home in New York to Boston, Goetz 35, New York City, lost 10 pounds during his 14 days of paddling.

The SNAPSHOT GUILD

Take Children's Pictures Now

Pictures like these will lend enchantment to your "Memory Album."

How many members of the Snapshot Guild have taken snapshots this summer of their children? It would be interesting to know for so few parents realize the importance of keeping what might be called "Memory Album"—fascinating, story-telling pictures of their children. The two pictures above are excellent examples of story-telling pictures—the kind you should strive to take for your "Memory Album." They were taken on just such a day as we hope to have tomorrow—sunshine and bright skies. Mother snapped little Billie as he was making a vain effort to sweep the front walk while Jane was apparently pleased round their toy dog and dolls. Round they real story-telling snapshots!

Suppose that you want to snap a picture of your little son or daughter playing or "working" in the yard. This is what you should do.

First of all don't try to get the child to pose, for the chances are he will appear in a stiff, unnatural position in the finished picture. Let him become busy engaged in whatever he is doing and then rather nonchalantly get as near to him as possible with your camera. If you have a box camera you should not be closer than eight feet. Have the

camera (if it is of the box type) set at the largest "stop" or lens opening and you are ready to "shoot" the minute your child unintentionally or intentionally, if he is a good actor, assumes an interesting pose or position. Be sure all of him shows in the finished print minus his head or an arm. Here's another simple precaution. The shutter on a box camera operates at a speed of approximately 1/250 of a second. This is not fast enough to stop action when the camera is close to the subject, so in taking the picture of your child wait until that moment when he is not in motion before snapping the picture for otherwise the image will be blurred.

If you have a folding camera with a focal scale you can work as close as six feet to your subject and get a larger image. Set the diaphragm control pointer at f.11 or if it is quite shady, at f.8. Set the shutter speed indicator at 1/250 of a second or number twenty. Locate the child in the finder and snap the picture.

Don't have the sun striking the child in the face and then expect him to blink. Let the light come across his face and you will get interesting shadows and show his features much better. And there'll be no squinting.

JOHN VAN GUILDER.

WORLD HAPPENINGS
BRIEFLY TOLD

Something new in the way of freak wheat plants was grown by W. F. McCallum, McCre, Black, farmer. A single spikelet of oats with two grains was found on a head of wheat about half way up the spike.

Smooth starting and stopping, and rapid acceleration are claimed for a new turbine drive engine with only coupling rods visible to appear shortly on the London and Scottish railway.

Struck in the eye by the sight on her gun from the recoil as she fired at a mountain goat, Mrs. P. A. Curtis, of New York and Bermuda, suffered the loss of the eye in hospital at Jasper, Alta.

An increase of more than \$1,000 over last year was reported for the Canadian National Institute for the Blind both at the Canadian National Exhibition. Sales were \$7,909.88 compared with \$6,499.41 last year.

Stipends greatly below the rates fixed by the assembly regulations are received by large numbers of Presbyterian clergy in Montreal, it was reported at a meeting of the presbytery called to appoint a minister to a new charge.

Henri Rivest, who describes himself as a "professional tipster" for insurance adjusters and pleaded guilty to setting eight fires in the north end of Montreal, was sentenced to five years in penitentiary by Judge J. A. Metayer.

Invention of a wire screen similar to a dog muzzle in design to fit over automobile headlights as a protection from flying stones on gravelled highways has been patented in the United States and Canada by Noel F. Judah, of Edmonton, who has formed a syndicate for manufacture.

Premier Mitchell Hepburn of Ontario, on a western election tour, saw his first ranch, the 100,000 acre McIntyre ranch on the Milk river ridge south of Lethbridge, where 4,000 "white-faces" are run on a "farm" on which there are 145 miles of fence.

The Automobile World

Over Thirty-five Million Cars Are In Use

The motorist who brags of 100,000 miles has still some distance to go to cover the world's highways. In a little booklet issued by the Automobile Manufacturers' association, packed with unusual and interesting information, it is stated that there are 9,231,000 miles of highway in the world.

The United States has 3,665,354, one-third of the total. Soviet Russia is second with 1,882,109, and Japan, rather surprising in view of its small area, is third, with 594,626. Australia takes fourth place, with 468,261, and Canada is fifth with 406,124. At the other end of the scale is Gibraltar, with 15 miles of road, and French Somaliland with 25. But Gibraltar has 66 cars to each mile of road, while the United States has only 8.1 per mile, and Canada 27.

According to the book, the average life of cars is 8 1/2 years. It is said also that 95 per cent of all cars sell for less than \$750 wholesale; that farmers use 26 per cent of all trucks; that there are 35,087,000 motor vehicles in the world, of which 71 per cent are in the United States; that motorists pay six times the taxes they paid 15 years ago; that in automobile deaths per 10,000 motor vehicles Canada has the second lowest standing in the world, with 9.1—second to New Zealand's 6.8—and Italy the highest at 54.5—24th—million Japan.

Fruit Imported By Canada

Canada, the United Kingdom, France, Germany and Austria are leading world importers of fruit. Canada does not require to import apples, but the average annual import of other fruits into Canada from 1928-32 included 74,000 tons of bananas, 78,000 tons of oranges, 20,000 tons of dried grapes, 12,000 tons of lemons, 11,000 tons of grapes, and 8,000 tons of pears.

The ending of a play running in London has been altered. A capricious critic complains, however, that it hasn't been put any nearer the beginning.

Pictures Without Camera

First Movie Film Of This Kind In Made In London

The first motion picture film even to be made without a camera was shown to the public in London, England, under the auspices of the post office.

It consisted of colored patterns which moved in tempo with a rumba played on the sound track of the film. The patterns were applied directly to the film by hand.

The invention was made by an Australian artist, Len Lye, who sought by use of a film to avoid the mechanical difficulties encountered in providing a color accompaniment to music by means of electric lights.

The post office has ordered other films of the same nature, which will be used to advertise its services.

Linen For Airplanes

Extensive orders for aeroplane linen for civil and Government aeroplanes have been placed recently in Belfast. Not since the war have so many linens been kept busy with this branch of manufacture.

C. N. Exhibition

Most Successful Held Since The Peak Year Of 1928

Director of the Canadian National exhibition reviewed the most successful exhibition from a business standpoint since the peak year of 1928.

The big fair closed with 151,000 persons attending the impressive closing ceremonies. Total attendance for the two weeks of the exhibition was 1,651,000, an increase of 148,000 over last year.

Officials estimated retail and wholesale purchases were 32 per cent higher than any year since 1928. The number of foreign buyers was twice that of any previous year.

Has Driven Million Miles

A million miles in a car is the record of Eva Jordan, who began to drive a car when she was 52 years of age and has used 14 cars, has covered 1,000,000 miles in 12 years without an accident. She carries State patients from all parts of Iowa to the State University Hospital at Iowa City.

HONORS PIONEERS

—Canadian Pacific Photo.

Sir Edward Beatty, G.B.E., chairman and president of the Canadian Pacific Railway, is shown here beside the cairn which marks at Craigellachie, B.C., the spot where in the presence of Sir William Van Horne and others of Canada's railway giants, drove the last spike completing the Canadian Pacific Railway from ocean to ocean across more than 3,000 miles of formidable country, on November 7, 1885. In the golden jubilee of the Canadian Pacific's history, Sir Edward, during his current trans-Canada tour, dropped off his special train at Craigellachie to pay his respects to the memory of the builders of his great transportation company and to receive the greetings of Craigellachie's handful of citizens.

Household Arts

by Alice Brooks
A Crocheted Blouse in a Easy Stitch

PATTERN 5426

The individuality of this crocheted shirtmaker blouse doubles its charm, and when you find how easy it is to make, you'll want to go right on and crocheted a plain skirt for it, too (pattern 5353). Then you'll have a two-piece ensemble to wear right through the Fall and Winter. The lacy stitch which composes the entire blouse is very quickly learned by heart, and a grand use to add to your crocheted repertoire. The blouse has raglan sleeves, which are so easy to fashion, while the pretty bow is made of strands of the same wool. The buttons make a smart trim, and sleeves may be either short or long.

In pattern 5426 you will find complete instructions for making the blouse shown; an illustration of it and of the stitches needed; material requirements. The blouse comes in size 16-18 and 38-40. Price of pattern 20c.

In pattern 5353 you will find complete instructions for making the skirt shown in sizes 16-18 and 38-40; an illustration of it and of the stitches needed; material requirements. Price of pattern 20c.

To obtain these patterns and 20 cents each (40 cents for both) in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg News-press Union, 175 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

SUNDAY SCHOOL LESSON

SEPTEMBER 22

JAMES

(A Great Christian Leader)

Golden text: Blessed is the man that endureth temptation; for when he hath been approved, he shall receive the crown of life, which the Lord promised to them that love him. James 1:12

Lesson: Acts 15:1-21; James 1:1-17.

Devotional reading: Matthew 4:1-11.

Explanations and Comment

Rejoice in Suffering, verses 2-4. Great it as pure joy, my brothers, when you come across any sort of trial, sure that the sterling temper of your faith proves endurance; only, let your endurance be a finished product, so that you may be finished and complete, with never a defect (Moffatt's translation). It is not upon your own authority that James counsels his readers to count it all joy when trials befall them, for he at once reminds them of their own experience, knowing as they said, that the testing of their faith created endurance. Trials are not a joy in themselves, but when rightly borne they are to be rejoiced in, as opportunities for practicing virtues. Recall Mt. 5:11, 12.

This doctrine of joy in suffering which at first sight seems to be almost superhuman, is shown by experience to be less hard than the apparently more human doctrine of resignation and fortitude. The effort to be resigned, and to suffer without complaining, is not a very inspiring effort. Its tendency is toward depression. It does not lift us out of ourselves or above our tribulations. On the contrary, it leads rather to self-contemplation and a brooding over miseries. Between mere resignation and thankful joy there is all the difference that there is between mere obedience and affectionate trust. The one is submission; the other is love. It is in the long run easier to rejoice in tribulation, and be thankful for it, than to be merely resigned and submit patiently. And therefore this "hard saying" is really a merciful one, for it teaches us to endure trials in the spirit that will make us feel them least.

Whence Temptation Comes, verses 12-17. Blessed is he who endures under trial; for when he has stood the test, he will get the crown of life, which is promised to all who love him. "The more endurance of temptations and afflictions will not win the promised crown, unless temptations are withstood, and afflictions endured in the right spirit. The proud self-reliance and self-repression of the Stoic have nothing meritorious about them" (Alfred Plummer).

The Manx Language

Only One That Does Not Contain Swear Words

Interest in the Manx language, which has been on the verge of extinction, is being revived by the Manx Society, composed of ardent nationalists of the Isle of Man. When the last Manx census was taken, four years ago, 529 persons could speak in Manx, but 60 per cent of them were then over 65 years of age. A peculiarity of the Manx language is that it contains no swear words. How Manx gotters were able to relieve their feelings a few years ago, when the language was generally used on the island, is being asked by those against the new movement who contend that perhaps that may be why Manx has gone out of use.

Success Through Failure

It is a mistake to suppose that men succeed through success; they much oftener succeed through failure. By far the best experience of failures in dealing with others in the affairs of life. Such failures in sensible men incite to better self-management, and greater tact and self-control, as a means of avoiding them in the future.

Sunlight Is Trapped

Ingenious Device Ensures Full Benefit Of Sun's Rays In The Home

In a block of flats now being built in London, sunlight is being "laid on."

Not just sun-ray lamps or artificial sun-ray apparatus, but real sunshines, so harnessed that it switches itself on as soon as the sun appears, and switches on the electric light as the sun disappears.

This is the first installation in England of an ingenious device invented by a French engineer, Jacques Arthuya, which puts sunlight "on tap" for domestic lighting.

The device enables every room in a house, including the darkest cellar, to be efficiently lighted by the rays of the sun, even with blinds drawn across the windows, or even if there are no windows.

This is achieved by an arrangement of mirrors and lenses. Up on the roof there is a big mirror mounted on a slowly rotating axis, operated by a tiny 1-8th horse-power motor.

A mercury thermostatic device, worked by the heat of the sun, controls the motor and thus keeps the mirror moving just enough to make it follow the sun across the sky—so that it is always receiving the direct rays over its entire surface of 40 square feet.

These rays are reflected by another mirror fixed at an angle that will deflect them down a vertical shaft to the basement. At the height of the ceiling in each room are mirrors, so arranged that a number of descending rays are trapped as they reach each story and deflected to the ceilings of the rooms surrounding the shaft.

The rays are then finally deflected from room to room through small apertures in which mirrors are set. Should the sun go behind a cloud the mercury in the thermostat begins to fall. That action is sufficient to switch on the electric light.

To make the efficiency of this apparatus complete all the mirrors are polished automatically by an arm which operates from the main motor. This wipes each mirror over after one complete rotation of the central mirror on the roof.

Stronger In Frozen State

Zero Temperatures Do Not Weaken Wooden Supports

Because trees are often heard to crack or pop in below zero temperatures and limbs seem to break off more often in winter than in summer, many believe that intense cold definitely weakens wooden members and that ordinarily safe mow or bridge supports might approach the danger point in below zero temperatures. Tests at Syracuse University show that there is no basis for such belief, but that on the contrary both green and kiln dried wood are stronger in a frozen state than at ordinary temperatures. The green wood shows the greatest increase in strength, doubtless because of its greater moisture content.

Prefer Cigarette To Pipe

Fritze's pipe, long the symbol for things Germanic, is finally surrendering to the more modern cigarette and pipe. In a block of flats now being built in London, sunlight is being "laid on." Not just sun-ray lamps or artificial sun-ray apparatus, but real sunshines, so harnessed that it switches itself on as soon as the sun appears, and switches on the electric light as the sun disappears.

Alexander the Great was born in Europe, died in Asia, and was buried in Africa.

BRITAIN STANDS BEHIND LEAGUE ITALY IS TOLD

Geneva.—Great Britain stands unreservedly by the covenant of the League of Nations, the league assembly was told. Sir Samuel Hoare, foreign secretary, was clear and emphatic as he addressed the league assembly. "The attitude of His Majesty's government," he declared, "has always been one of unwavering fidelity to the league and all it stands for."

The present dispute between Italy and Ethiopia was no exception. "The recent response of public opinion shows how completely the nation supports the government in full acceptance of the obligations of league membership," said Sir Samuel.

Great Britain supported the league from no selfish nor imperialist motives. The British government and the British people maintained support of the league as the most effective means of ensuring peace.

But collective security meant more than what are commonly called sanctions. "It means not merely article 16 but the whole covenant. It assumes scrupulous respect for all treaty obligations. Its foundation is a series of fundamental obligations freely accepted by members of the league to submit any dispute likely to lead to war to peaceful means of settlement."

One thing was certain, he added pointedly: If the burden of obligations under the covenant had to be borne it must be borne collectively. "If risks for peace are to be run, they must be run by all."

"On behalf of His Majesty's government in the United Kingdom I can say they will be second to none in their intention to fulfil within the measure of their capacity the obligations which the covenant lays upon them."

The British government felt the present problem was economic rather than political. It was the fear of withholding essential colonial raw materials which was causing alarm. Britain was ready to share in any collective attempt to deal in a fair and effective way with the difficulty. He suggested an inquiry "which should be limited in this case to raw materials from colonial areas, including protectorates and mandated territories."

"I suggest emphasis in the terms of reference should fall upon the free distribution of such raw materials among the industrial nations which require them so all fear of exclusion or monopoly may be removed once for all."

In his conclusion, Sir Samuel said: "The league stands, and my country stands with it, for collective maintenance of the covenant in its entirety, particularly for steady collective resistance to all acts of unprovoked aggression. The attitude of the British nation in the last few weeks has clearly demonstrated this is no variable and unreliable sentiment, but a principle of international conduct to which they and their government hold with firm, enduring, universal persistence."

The foreign secretary said, "If only these war clouds could be dispelled, with how much greater effect could we turn to those economic questions that often matter so much more in the modern world than political problems."

The British secretary asserted the spirit of war "even perhaps of war for war's sake has raised its head in more places than one," adding that "from the growing fear of war armaments are increasing, even in Britain, therefore a vicious circle of insecurity has been set up."

Prolonged applause welcomed Britain's firm declaration as he finished, picked up his manuscript and descended to the floor.

May Have Private Army

Vienna.—The constituent congress of the new Zionist organization has voted to establish an armed "Jewish legion"—an international army—to combat oppression of Jewish people throughout the world. Several delegates insisted "private armies" to serve special needs are the fashion in Europe, and "the Jews need a defence force."

Nazi Congress

Chancellor Hitler Receives Ovation At Nuremberg

Nuremberg.—Clanging bells and the wild cheers of a tremendous crowd greeted Chancellor Hitler as he arrived here by airplane to open the third national-wide Nazi congress since establishment of the third reich. He was accompanied by Rudolf Hess, his deputy in the Nazi party.

Received by the burgomaster of this picturesque old city, Chancellor Hitler accepted the gift of a reproduction of Charlemagne's sword, emblematic of the glories of Germany's Germanic empire which collapsed in 1796.

The reichsfuehrer voiced his satisfaction at the new heights reached by the vermachit, which he characterized as the symbol of Germany's regained strength and freedom.

Bernardo Attolico, new Italian ambassador at Berlin, was the only foreign diplomat to accept an invitation to attend the congress. All other diplomats stationed in Germany declined the invitation. Unofficial reports said they took the view that the party and the reich are separate entities, and that the congress was a purely domestic institution.

Would Restore Monarchy

Plea Is Made For A New Regime In Greece

Athens.—Premier Panagiotis Tzaldaris, head of the Greek republican government, issued a proclamation, urging the people to vote for the restoration of the monarchy.

The proclamation came after a night which saw tension between monarchists and republicans break into an open fight outside the doors of the cabinet chambers, with the bayoneting of two republican leaders by monarchist guards.

After deploping the night's events, Premier Tzaldaris' proclamation asked for calm and order, concluding:

"I consider democratic royalty as the natural regime for Greece and ask the people to vote for it in the impending plebiscite."

Manitoba Air Mail

Huge Quantities Of Mail Carried In Winnipeg Postal District

Winnipeg.—Close to a quarter of a million pounds of mail were carried by aircraft in the Winnipeg postal district since Dec. 10, 1934, when regular air mail service to the mining districts of Manitoba and western Ontario was inaugurated, it was announced by W. F. Lough, director of postal services.

The heaviest route during the period since Dec. 10 was the Winnipeg-Central Manitoba route, with 81,389 pounds. Manitoba's three routes accounted for a total of 131,418 pounds, and Ontario's for 109,222 pounds. The contractors are Canadian Airways.

Relief Census In B.C.

Will Give Authorities Complete Check On Unemployed

Victoria.—British Columbia government's new relief census will be taken in October, planned to give authorities a complete check on the capabilities of every unemployed person in the province.

Each relief applicant in the province, when he applies for his allowance next month, will have to answer 40 questions. He will have to describe what work he is trained for, what he has done and would be able to do and whether he is physically fit to handle a job.

No More Hazing

Saskatoon.—"Hazing" is a thing of the past in initiating freshmen into the University of Saskatchewan here, after incidents last term which resulted in the banning of over-enthusiastic welcomes. This year, new students are being treated to welter roasts.

Winnipeg Grain Exchange President Winnipeg.—Rupert C. Hoek, of K. B. Stoddart and Company, Limited, was elected by acclamation president of the Winnipeg Grain Exchange, succeeding Roy W. Milner. W. J. Dowler and Henry Gauer were elected vice-presidents, also by acclamation.

TO BOOST SYSTEM

The Very Reverend Hewlett Johnson, Dean of Canterbury, who will sail for Canada in a few days to help organize a "Social Credit" League throughout the Dominion. Dean Johnson is an ardent supporter of the Social Credit system.

Wheat Crop Estimate

Yield For Three Prairie Provinces Placed At 272,000,000 Bushels

Ottawa.—Canada's wheat production for this year is estimated at 270,541,000 bushels, comprising 277,374,000 bushels of spring wheat and 13,261,000 of fall wheat. The estimate was announced by the Dominion bureau of statistics. The crop for the prairie provinces was estimated at 272,000,000.

The prairie crop includes 16,000,000 bushels of Durum wheat, and about 60,000,000 bushels of common wheat, so shrunken by rust or frost as to be unfit for milling.

The total wheat crop for the prairies in 1934 was 263,800,000 bushels. This year's crop is therefore 8,200,000 above that of last year. The total wheat crop for all Canada last year was 275,849,000 bushels, 14,892,000 less than this year's crop.

For the three prairie provinces the preliminary estimates of total production in 1935, compared with 1934 in brackets are, in bushels: Wheat, 272,000,000 (263,800,000); oats, 296,060 (172,040,000); barley, 73,036,000 (44,742,000); rye, 12,048,000 (4,381,000); flaxseed, 1,330,000 (827,000).

Valera Declined Invitation

Would Not Attend Dinner Given By British Delegates

Geneva.—Sir Samuel Hoare, British foreign secretary, and members of the British delegation to the League of Nations assembly, were hosts at a dinner in honor of the representative of the Emp're. President Eamon de Valera of the Irish Free State declined to attend, however. He also was absent from a similar dinner given last year.

BLOWOUT AT 250 MILES PER HOUR

Death almost stopped Sir Malcolm Campbell, British speed ace, from making his new world automobile speed record of 301 miles per hour, when the left front tire of the Bluebird blew out while the racer was travelling 250 miles an hour. This photo shows Sir Malcolm examining the tire which burst into flames because of the friction caused by the excessive heat.

Ethiopian Women May Fight

Emperor Accepts Offer Of Legion To Go To Front

Addis Ababa.—Emperor Haile Selassie has accepted the offer of a women's legion to go to the front and fight for Ethiopia in the event of hostilities with Italy.

The women, part of an organization called "For Love of Country," with a membership of several thousands and branches throughout the country, were dressed in natty uniforms—red capes, khaki breeches, leather puttees. They were armed with automatic pistols and medieval sabres.

The head of the African amazons' organization is Madame Wayzaro Ababath Charzoke, a wealthy home owner, who abandoned her home, land and riches to defend Ethiopia. She is 34 years old.

Winter Feeding Of Cattle

Abundance Of Feed In Most Parts Of Saskatchewan

Saskatoon, Sask.—"Renewed interest in the winter feeding of cattle is inevitable," J. D. Guild, agricultural agent of the Canadian National Railways for Saskatchewan, says. Excellent returns secured by the few venturesome feeders last year and an abundance of feed in most parts of the province, make such interest certain.

Feeder cattle are likely to be considerably higher in price this fall, as some stock already has been contracted to the United States at prices from \$3.50 to \$3.75, Mr. Guild observed. The spread between buying and selling price was not likely to be as wide as last year, but in previous years narrower margins had meant profits to efficient feeders.

Probe Coal Industry

Investigation To Get Under Way In Alberta Soon

Edmonton.—Investigation into Alberta's coal industry will get under way almost immediately, with Sir Montague Barlow sitting as a one-man commission, instead of a three-man commission proposed by the old U.F.A. government, acting Premier Manning announced following a conference between Sir Montague and Hon. C. C. Ross, minister of lands and mines. Dates and places of sitting will be announced shortly.

The investigation will proceed as otherwise scheduled and be carried on until completed. All phases of the coal industry will be considered in an effort to improve production, marketing and consumption.

Declares War On Noise

Toronto.—Believed to be the first Canadian city to declare war on unnecessary noise, Toronto board of control passed a resolution prohibiting tooting of auto horns from 11 p.m. until 7 a.m. The motion goes to city council for approval.

INTERIM CREDIT FOR ALBERTA UNTIL END OF OCT.

Ottawa.—A loan of \$2,250,000 was negotiated between Premier Aberhart of Alberta and the federal government. It will carry the western province until the end of October, when negotiations toward a total advance of \$15,889,000 will be opened with the next government.

Premier Aberhart said he was satisfied with the interim credit after a final conference with Premier Bennett, Finance Minister Rhodes and treasury officials. He asked for \$18,289,000, which he believed was necessary to carry Alberta safely through its present fiscal year, which ends March 31, 1936. Premier Bennett took the attitude he should not bind the next government and agreed to advance enough money to carry the province until the end of October. A further application for financial assistance will be made then.

The western premier expected to leave for Toronto where he will seek co-operation of bankers in establishing his Social Credit financial system.

Following the conference, the two premiers issued the following statement:

Premier Aberhart and Attorney-General Huggill of Alberta met a committee of the federal cabinet. Mr. Aberhart made it clear that he was not seeking assistance for any plans that he might have for the future or for the purpose of carrying into effect any of his policies. He merely required financial assistance for Alberta to enable him to discharge obligations of the province that had been created and not paid by his predecessors.

The best information Premier Aberhart had been able to secure in the limited time at his disposal, it was estimated that it would require about \$18,000,000 to meet the liabilities of Alberta of all kinds up to March 31, 1936, being the end of the present financial year.

Mr. Bennett explained that the Dominion government could not undertake to deal with financial matters between Alberta and the Dominion beyond the end of October for there was a general election pending on the 14th of that month. Mr. Aberhart said he recognized that fact, and after careful consideration, it was agreed that the federal government will advance to Alberta \$2,250,000 on their one-year treasury bills.

This amount was the closest estimate that could be arrived at as to the sum that would be required between now and the end of October to meet the normal requirements of the province.

Campbell May Race Wood

Battle Between Speed Kings For Harmsworth Trophy Hinted

Windsor, Ont.—Speed kings in their own spheres, Sir Malcolm Campbell and Gar Wood may meet in 1936 in a battle for the Harmsworth trophy, emblematic of motorboat supremacy, the Windsor Daily Star, in a news story, said.

Prominent Detroit sports officials, said the Star, attach special significance to the British motorist's visit to the Michigan metropolis, intimating there is just a possibility he may be obtaining first-hand knowledge of water conditions on the Detroit river and Lake St. Clair where Gar Wood has defended his honors during recent years.

Mountain Climbers

Have Narrow Escape

Hung Over Cliff Edge To Avoid Avalanche Of Rocks

Tiflis, Russia.—Three mountain climbers saved themselves from an avalanche of stones by hanging over the edge of a cliff for 11 hours.

When the avalanche started, the three men tied themselves by ropes to a bit of solid rock and lowered themselves over the sides of the ledge. Eleven hours later, when the rocks had ceased popping out over them, the trio climbed back to safety.

The intrepid climbers were ascending Mount Nahar, 12,000 feet high.

STONY PLAIN SUN.

Published Every Thursday at The Sun Office, Stony Plain.

Thursday, Sept. 19, 1935.

Advertising Rates:

Display, 40 cents per column inch plate, 25c per column inch. Readers in Local, 15c line. Legal and Municipal Notices, etc., 15c line first insertion; 10c line each subsequent insertion.

Open Seasons for Game.

Deer, moose, Nov. 1 to Dec. 14 Ducks, geese, Sept. 16 to Nov. 14 Elk, Oct. 1—Dec. 14 Grouse, Oct. 1—10 Hungarian Partridge, Oct. 1—Nov 30 Fox, Nov. 1—Jan. 31 Mink, martin, otter, Nov. 1—March 31 Muskrat, Mar. 1—April 30 South of N. Saskatchewan river, no open season. Sunday Shooting is prohibited. Licenses may be procured at The Sun office

Judicial Sale of Farm Property by Tender.

Pursuant to the Order for Sale and the Directions of the Honourable Mr. Justice Ives, sealed tenders will be received for the purchase of the N.E. 1 of Sec. 36, Tp. 51, Rg. 3, W. 5th Mer., containing 160 acres more or less, reserving thereout all mines and minerals.

The vendor is informed that this land is situated 7 miles from Duffield, and one-half mile from the nearest school. About 70 acres have been under cultivation, and there are about 20 acres of hay land. There is on the property a frame house 20' x 22', a barn 24' x 32, and a hen house 12' x 16', which buildings are in a fair state of repair. There is a well on the property, and it is fenced on three sides.

Tenders must be enclosed in sealed envelopes marked "Tender Fraser vs. Barton No. 25589" addressed to H. P. Wallace, Clerk of the Supreme Court, Edmonton, Alberta, and must be in his hands not later than 12 o'clock noon on the 23rd day of September, 1935.

TERMS OF SALE.

Each tender shall be accompanied by a marked check or cash for 10 per cent. of the amount of the tender, and the balance of the purchase price shall be paid (unless the time is otherwise extended) into Court within 60 days after acceptance of tender, without interest, or in the alternative the purchaser shall execute a mortgage for the sum of \$1000.00, which shall be a first charge on the land, and the remainder of the purchase money shall be paid into Court within 90 days after the acceptance of the tender, without interest. The mortgage shall be for a term of 5 years payable in 5 equal annual instalments and shall bear interest at the rate of 6 per cent. per annum, payable yearly.

The deposit of 10 per cent shall be forfeited by the successful tenderer if he refuses to carry out the purchase after acceptance of his tender. Cheques of unsuccessful tenderers will be returned to them immediately after rejection thereof. The highest or any tender not necessarily accepted. In all other respects the terms and conditions of the sale will be the standing conditions of sale of the Supreme Court so far as same are applicable hereto.

For further particulars apply to Messrs. Lymburn, Reid & Cobboldick, 222 Tegner Building, Edmonton.

DATED at Edmonton, Alberta, this 20th day of August, 1935.

A GROVER'S AUTO BURSTS INTO FLAMES

Some excitement was caused on North Main street on Saturday near midnight, when a motor car belonging to a business visitor caught fire. Mr Mike Lizinsky, who is employed by the C. N. Ry. at Spruce Grove, was getting ready to return home in the car, and had operated on the starter 2 or 3 times, when the forward part of the car became enveloped in flames. A rush was made by several of the bystanders in an effort to extinguish the flames. Several hand grenades and a chemical engine from the firehall were brought into play. The car was pushed out, away from the buildings, and after the volunteer fire-fighters had been working on it for one-quarter hour, the fire was subdued. Following this, the auto was towed to a garage and Mr and Mrs Lizinsky were taken to their home at tee Grove.

Quack! Said the Duck.

"Duck!" shouted a local shooter on Monday morning, as he oiled up the shotgun, in readiness for another season. "It will be duck dinner for a crack shot like me."

"Quack! Quack!" came the reply from somewhere overhead.

Plenty Isn't Wanted.

Rust in wheat will cost farmers of western Canada \$100,000,000 this year.

Frost, hail, drought will cost farmers of western Canada \$100,000,000 this year.

Pests cost farmers of western Canada \$125,000,000 this year.

Weeds cost farmers of western Canada \$50,000,000.

The above are typical of much publicised remarks by prominent men, but are they true, asks the Alberta Wheat Pool Bulletin.

If there had been no rust, insect pests, weeds, hail, frost or drought, western Canada might have raised 650 million bu. of wheat this year. That would be enough to supply all of Canada's requirements and all of the world trade.

Wheat would then be dirt cheap—virtually valueless in trade.

It seems that some unfortunate farmers must have their wheat rusted, frozen, hauled, drouthed or eaten by insect pests, in order that prices may be maintained at fair levels.

The world's economic system doesn't seem to be geared for abundance of food crops.

SYNOPSIS

Nancy Nelson is a sub-deb, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he had, and his family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge. Nancy set-out one afternoon to climb to the top of a hill in order to obtain a view of the surrounding landscape and misses the path Aurora Tubbs had told her to follow. A truck comes along the road, driven by Matthew Adams, and she asks him which way to go. They ascend the hill, look around, and then go on to Cousin Columbine's. There Mark Adam tells Nancy that his brother Luke has broken his leg, and that Jack Nelson has been hired to help out while Luke's leg gets better. With Jack away, Nancy finds that she is lonesome, and having no books to read, the idea of starting a public library at Pine Ridge seems a good one, and Nancy writes home to get her parents to send all the books they could spare and all they could induce others to let them have.

Nancy and Matthew Adam go Christmas shopping at a neighboring town. On their return to Pine Ridge, Nancy is amazed to see the Columbine residence all lit up, and she asks Matthew if he knows why. He said: Let's go in and see. Then Nancy learns that she is having her debut, but in a different setting than had been planned for her in Boston.

Nancy's parents and friends gave their liberal support to her request for books, and a sizeable box arrived in due course. Father Adam painted a sign for the library, and the Adam boys worked on the shelves for the books and decorations to make the room look presentable.

Now Go On With The Story

CHAPTER XVI.—Continued.

It was that evening, seated before a crackling hearth-fire at the Adam ranch, that Cousin Columbine told them the story of the Pemperton

stampede began. There was pandemonium in that lovely valley. People staking out claims—starting tunnels—buying "town lots" which Pemperton himself marked out and sold at sky high prices. One fortunate woman who had paid twenty-five dollars for a strip of land in that locality a year before, sold it during that hectic time for ten thousand! That sounds incredible now, but it's the way things go in boom days. I've seen it happen.

"More than a thousand people, possibly twice that number came pouring in. The town was incorporated; a man named Tyler was made mayor, and another whose name I can't recall was sheriff. When I saw the place there were no less than a dozen saloons—three general stores—a long street of frame houses or tents, and even two ore-crushing machines, though not one ounce of precious metal was ever discovered in the vicinity."

"What became of the people when the bubble burst?"

"Drifted away, poor souls, leaving their dead behind them—their high hopes crushed. I recall one family stopping at our house for supper. Father bringing them in to be fed and warmed. They were a pitiful sight: the young mother frail and worn by hardship, the father in ragged shirt and trousers, and an ailing baby. They promised to let us know how things went with them, but we never heard."

"Ships that pass in the night," said Matthew softly, and Luke broke in: "But will you tell us how old Pemperton escaped being larried and feathered when the hoax was discovered?"

"For the very good reason," replied Miss Columbine, "that the scam was nowhere to be found! When the boom was at its height he disappeared, and now all that is left of the 'ghost city' which bore his name, are those tumble-down buildings (one of which cost a woman five thousand dollars) I was told, and that small building ground where lie the bodies of those who were too frail to survive the rigors of frontier life."

"I'd like to see that place," said Nancy, as Cousin Columbine ceased speaking.

"You shall, my dear; and we'll make an excursion out on the plains as well. They can be so beautiful, our western prairies, that I hate to think how cruel they sometimes are."

"Cruel!" Nancy questioned, a little puzzled. "You mean those sudden blizzards when the grazing cattle have no shelter? Well, this winter's over, Cousin Columbine, and if you've no objection I'll start getting acquainted with the plains to-morrow. I've got a marvelous idea. Why can't I ride to Prairie Ranch with Jack and Matthew? It would be a treat."

"You're a new woman, Nancy Nelson," remarked her brother, "if you regard as anything like a lark the necessity of piling out of bed along with the robins! We'll pass your lower at five a.m., young lady. Do you think you can make it?"

"Of course she'll make it," put in Matthew eagerly. "We'll get lunch at Uncle Tom's. Nancy. It'll be bully having you along."

Thus it was settled, though on the ride home that night Cousin Columbine predicted a change of weather. Despite this prophecy the sun was shining when Nancy awoke, dressed rapidly, and slipped downstairs on tip-toe; but as she passed the lower bedroom a call arrested her.

"That you, Nancy?"

Nancy opened the door.

"Did I wake you up? You were wrong about the weather, Cousin Columbine. It's a lovely morning."

"What are you wearing?"

"My knitted sport-suit. I dare say I'll roast, but I won't take any wraps except my hiking sweater."

"Indeed you will!" Cousin Columbine sat up in bed, stretching a hand toward the window as if to feel the atmosphere. "There's a chill to the air, different from anything we've had this long time. Take your fur coat, Nancy, or I shan't have an easy moment all day long."

"My fur coat, why—"

"Don't argue," snapped the old lady. "I know this country better than you do. I've seen days start out like summer's time of year, and end with a snow storm. My response—"

DON'T RISK BAKING FAILURES....

"DON'T TAKE CHANCES WITH INFERIOR BAKING POWDER. LESS THAN 1/2 WORTH OF MAGIC MAKES A FINE, BIG CAKE. AND MAGIC ALWAYS GIVES GOOD RESULTS."

one MISS ESTHER CHAPMAN, popular cookery editor of The Farmer.

Leading Canadian Cookery Experts warn against trusting good ingredients to inferior baking powder. They advise MAGIC Baking Powder for perfect cakes!

CONTAINS NO ALUM.—This statement on every tin is your guarantee that Magic Baking Powder is free from alum or any harmful ingredient. Made in Canada.

able to your parents for your safety, child; and I—I command you to take that coat."

Nancy laughed, realizing that there was no use in combating an old lady over seventy.

"All right," she said good-naturedly, "the coat goes along as an extra passenger. I'll run up for it now."

"What sort of stockings have you got on?"

The question caught her at the door, and the girl turned, a bit exasperated.

"Don't let that worry you! I'm wearing sport shoes and woolen hose. I shan't freeze to death, Cousin Columbine, even if we get one of your spring blizzards."

She was surprised to note that this absurd remark was taken seriously.

"Look here, child, don't you start home in any sort of storm. Remember that. You think me foolish, no doubt, but I've seen a good two feet of snow later than this, and herds of cattle frozen in the drifts out on that prairie. Close my window, Nancy. I may as well get up and see what's happening."

She was on the porch when they rode away, a trooped look in her usually placid eyes that Nancy remembered afterward. She made sure that Jack had taken his sheep-lined coat—looked up at the sky, and said at the last moment, "If sort of what you wouldn't get, Nancy. There's something in the air this morning that I don't like."

"Now don't you worry, Miss Columbine," soothed Matthew. "If there's the least suspicion of bad weather, we'll keep her safe at Uncle Tom's until it's over."

This seemed reasonable; and as they waved good-bye a robin hopped down from a spruce tree and began his breakfast at Miss Columbine's bird board. But even this emblem of the springtime failed to cheer her.

"I ought to have set my foot down," she said soberly when Aurora Tubbs arrived an hour later. "I don't like this air."

The sun played hide and seek all morning, and at last retired behind a cloud and stayed there. At noon a wind sprang out of the north, rattling the shutters of the Nelson mansion with sudden fury; and ten minutes later a flurry of blinding snow had shut them in. Columbine Nelson kept going to a window and staring out. Her lunch was left almost uneaten. Twice she sat down at the telephone and then turned away, knowing that if there were anything to say Eve Adam would have called her.

The storm increased; and at half past four, after moving restlessly about the house, Miss Columbine stood so long at the front window that Aurora, who had been curiously silent during those dragging hours, burst out: "Don't you keep fretting?"

Miss Columbine. It makes me nervous. Didn't Matt Adam promise they wouldn't start if it was stormy in the way back, and he's real level-headed come an emergency."

"What's what I've been telling my aunt all day," replied Miss Columbine. "Even if they started before the storm began, Aurora, Mark would have sense enough to—There's the telephone!"

Her hand trembled as she lifted the receiver, and Aurora stood close by, head bent in an effort to catch the distant voice.

"That you, Miss Columbine? I've tried to get you all afternoon, but our line was in trouble. Jack hasn't left. I hope. Tell him not to

try to get out here to-night. Luke and his father can—"

"Jack! He's not here, Eve," broke in the old lady, her voice shaking. "Bugsy! They didn't leave your brother's in such a storm!"

"Not there?" A pause, and then Eve said, trying to speak calmly: "Listen Miss Columbine. Can you hear clearly?... Tom telephoned at seven this morning for them not to come—that Mark was flat in bed with a bad throat. It was too late to stop the children anyway, so I didn't call you; and later my brother phoned again. He—he said Jack and Nancy started back immediately after an early lunch. I told him it looked as if a storm were coming, but he said the sun was glorious out there and that—"

"Then—then Mark's not with them?" almost wailed Miss Columbine.

"No, but—Oh, don't worry yourself sick, dear Miss Columbine! There are ranches not so terribly far apart, you know; and there's a schoolhouse. Surely they would have reached the schoolhouse and waited there! But I'll try and get the ranch again by telephone and—"

It was then that the storm did something to the wires, and Columbine Nelson heard no more. But three hours later, just as the dreaded night was shutting down, the Adam truck with John at the wheel, and Eve, covered with snow from head to toe beside him, fought its way into the yard and stopped before the door.

(To Be Continued)

Little Helps For This Week

Thou caldest in trouble and I delivered thee. Psalm 81:7.

Be strong and of good courage, dread not nor be dismayed. 1 Chronicles. 22:15.

Thou canst calm the troubled mind. Theirs it cannot still. Teach me to be all resigned To my Father's will.

Though this patient meek resignation is to be exercised with regard to all outward things and occurrences of life, yet it chiefly respects our own inward state, the troubles and weaknesses of our own souls. And to stand in a meek resignation to God, when your own impatience and pride attack yourself, is a higher and more beneficial performance of this duty than when you stand turned to meekness and patience when attacked by the pride or wrath of other people.

Rain is Treated With Oil

Stickiness is Removed And They Look More Attractive

Seeded muscat raisins are sticky, making it necessary for women to coat their hands with flour in order to handle them. The seeds that were removed were also sticky, and handling them was a messy job for the technical men in charge of the process. Chemists tackled the problem, and they succeeded in making the raisins supply the solution. As a result the raisins are now being sold, and in addition to being easier to handle because of the lack of stickiness, they present such an attractive appearance that the packers are now able to market them in transparent wrappers.

A good-hearted man carries some of it in his pocket-book. 2118

THE WILSON FLY PAD CO., Hamilton, Ont.

Engineer From Rocky Mountains Becomes Deputy Minister of Interior

Keen outdoor man, enthusiastic member, and a past president of the Trail Riders of the Canadian Rockies, and a leading stalwart in the ranks of the Trail Hikers, J. M. Wardle, chief engineer, National Parks of Canada, has won well deserved promotion to the post of deputy minister of the Department of the Interior at Ottawa.

Although only in his "forties", Mr. Wardle has been rated as one of the most efficient officers

of the Department of the Interior for many years. He was born in Chilliwack, British Columbia, on June 26th, 1888, receiving his education at New Westminster, B.C., and Queen's University, Kingston, where he graduated with the degree of bachelor of science. Mr. Wardle joined the Department of the Interior in 1912, and was appointed Superintendent of Banff National Park in 1918, continuing in that office until 1920, when he was transferred to Ottawa as chief engineer in charge of National Parks construction. He was given the post of chief engineer in 1923.

An expert on mountain highway construction, Mr. Wardle has supervised the building of practically all main highways in the National Parks of Canada. Under his direction the Banff-Windermere highway, the first motor road across the Central Rockies, was completed in 1925,

and in 1927 the road known as the Kicking Horse Trail, from Lake Louise, Alberta, to Golden, British Columbia, was also completed. He has supervised the building of the "east leg" of the Big Bend highway along the Columbia River from Donald, B.C., to Boat Encampment, and recently was placed in charge of the construction of the "west leg" from Revelstoke, B.C., north to Boat Encampment. This highway when completed will form the final link in the western section of the trans-Canada highway.

The latest highway project to come under Mr. Wardle's supervision was the road now under construction from Lake Louise to Jasper, Alberta. Mr. Wardle has also had charge of all other construction work in the National Parks. He takes over his new duties with the best wishes of his many friends in the Rockies and, indeed, throughout Canada.

CHANGE MADE IN THE ELECTION ACT.

Under a law which has been materially changed in several particulars, voters in the forthcoming Federal election next month will cast their ballot. Heretofore, in rural polls, a person who was known to be eligible as a voter but whose name was not on the list could vote by making an affidavit. This is not possible now. If he is not on the list today he cannot vote Oct. 14. Another innovation consists in provision for absentee voters, including fishermen, lumbermen, miners and sailors.

Another new provision is that every voter—rural or urban—is to be notified by the R. O. as to the precise location of the poll at which he is to vote.

It is estimated there will be over 800,000 new voters, bringing the eligible total close to 6,000,000. The increase in voting strength is largely urban; the rural constituencies being for the most part about the same as in 1930.

Aberhart—Strass.

On Sunday, September 8, at the Glory Hills Reformed Church, Miss Frieda Strass, daughter of Mrs. Anna Strass and the late Frederick Strass, was united in the holy bonds of matrimony to Mr. Herman Aberhart of Edmonton.

The ceremony was performed by Rev. C. H. Reppert, pastor of the church. On returning from their honeymoon the couple will take up their residence in Edmonton.

A Charming Affair.

Barth's Orchestra sprang a couple of new tunes on the dancers who patronized the affair in Kelly's Hall on Friday night, put on by the Tennis Club's officers and members. The occasion was the club's annual Sports Dance, and every one had a pleasant time. A delightful lunch was served at midnight.

Sporting Notes.

In preparation for the coming winter sports season, a meeting of the younger hockey players was held last week in Mr. M. Barnes's store. At the election of officers for the hockey division of the new club Mr. George A. Trapp was elected President and Mr. Walter Laroche as Secretary. With regard to the other divisions of the club, this matter will be threshed out at a meeting to be held this week.

Becoming Vote-Conscious.

With the date for voting but a few weeks away, when Premier R. B. Bennett will either be returned to power for another 5-year term or be replaced by 1 of 3 other party leaders the Federal election campaign is gradually warming up to what may be without precedent in Canadian history. From present indications it would appear the people of Canada, as never before, are becoming vote conscious. Added to this the increasing interest in the election in the 245 ridings across the Dominion, we may expect the heaviest voting ever polled.

In Edson-Jasper Riding, in which we are located, there is the prospect of candidates from 4 parties contesting the seat—Liberal, Conservative, C. C. F. and the Social Credit.

**DRESS MAKING AND
PLAIN SEWING.**
Apply **MRS. WALES,**
The Old John B. Miller House, 3rd
Street, Stony Plain.

On the Side.

A letter received at The Sun office shows the widespread interest which has been aroused by the events occurring recently in the political arena in this province. The epistle is from the pen of Mr. Chris Pitzer, who, when here, was always in the van in every movement for the betterment of those in the community. That he is taking a keen interest in public affairs on his side of The Line is shown when he says, in reviewing the situation there: "Already we have many movements here that may develop far more strength than political movements, unless economic conditions become rapidly better." Mr. Pitzer has done quite well in his new surroundings, in the Tacoma (Washington) district; and states he has several thousand here which he is taking care of, and with which he has had good luck this year; eggs are up to 35¢ a dozen now, and have never been below 22¢ a doz. The fruit crop is coming on good. Chris would like to have a good chat with some of his old friends here, and may give a visit next summer, if business permits.

—As one sports writer has it: "On Monday noon the season opened for ducks, geese and alibis."

—According to the columnist in an Eastern daily, the Dumber the Followers, the Greater seems the Leader.

—The Dominion Fire Commissioner is said to have given out a statement regarding fire originating from tobacco smoking. These are said to have amounted to 10,000 in a recent year.

—Now that the bird game shooting season is upon us, no doubt we'll be hearing of stock being knocked over by the careless shooters.

—At a recent inquest in a town in the east on a centenarian the coroner declared: "This woman's age is in doubt." Well!

—The Falls of Niagara have always proven a great attraction to visitors, who come from near and far for the view. A gent who paid the Falls a visit last Summer was telling the writer of his visit. On the rubberneck motor car he was on were a number of school teachers from a convention being held at a nearby place. When the car got near Table Rock the megaphone man intimated "these are the mighty Niagara Falls!" and if the ladies will please stop talking we'd be able to hear the mighty roar!

Registration for Residents.

The Provincial Government is said to have under consideration plans for the registration of residents of Alberta, for the receipt of the basic dividend. Pending completion of plans, Acting Premier Manning is said to have stated it was proposed to send out forms for individuals to fill out, on which there would be full information required by the government.

In distributing registration forms these would be sent to the presidents of constituency organizations, who would in turn send them to zone zone leaders, who would forward them to group leaders.
